

ABSTRACT OF THE DISCLOSURE

Access to digital content may be controlled by determining digital content to be made accessible via a rights locker describing a user's access rights for digital content associated with the rights locker, determining enrollment authentication data, and sending a rights locker enrollment request to a rights locker provider, where the rights locker enrollment request comprises a digital content request and the enrollment authentication data. An authenticated rights locker access request is received in response to the sending, where the authenticated rights locker access request is for subsequent use in accessing digital content associated with the rights locker.
